

# Photosynthesis — What Goes In, What Comes Out

Name: \_\_\_\_\_ Date: \_\_\_\_\_

**To the adult helping:** Read every part of this page aloud with the student, including the word banks. The student can say an answer, point to it, or write it — any of these is fine.

**I can show what a plant needs to make food, and what it makes.**

A plant makes its own food. This is called photosynthesis. It happens inside the leaf. Look at the picture. Find what goes in. Find what comes out.

## WORD BANK

light energy

water

carbon dioxide

glucose (food)

oxygen

## WORD TO KNOW

**Photosynthesis** — how a plant makes its own food.

## WORD TO KNOW

**Chlorophyll** — the green colour in leaves. It captures light energy.

## WORD TO KNOW

**Carbon dioxide** — a gas in the air. The plant takes it in through its leaves.

## WORD TO KNOW

**Glucose** — the sugar (food) the plant makes.

## Write It as an Equation

light energy + water + carbon dioxide →

\_\_\_\_\_ + \_\_\_\_\_

### WORD BANK

glucose (food)

oxygen

One part I'm still not sure about:

\_\_\_\_\_

### WATCH OUT

Many people think a plant gets its food from the soil.

A plant makes its own food using light, water, and carbon dioxide. Soil gives the plant water and minerals — not food.

### CHECK YOURSELF

Does a plant get its food from the soil? Say yes or no. Then say why.
