

Plant Cells — Parts and Jobs

Name: _____ Date: _____

To the adult helping: Read every part of this page aloud with the student, including the word banks.
The student can say an answer, point to it, or write it — any of these is fine.

I can find the parts of a plant cell and tell what each part does.

A plant cell has small parts inside it. Each part has its own job. Look at the picture. Find each part.

WORD BANK

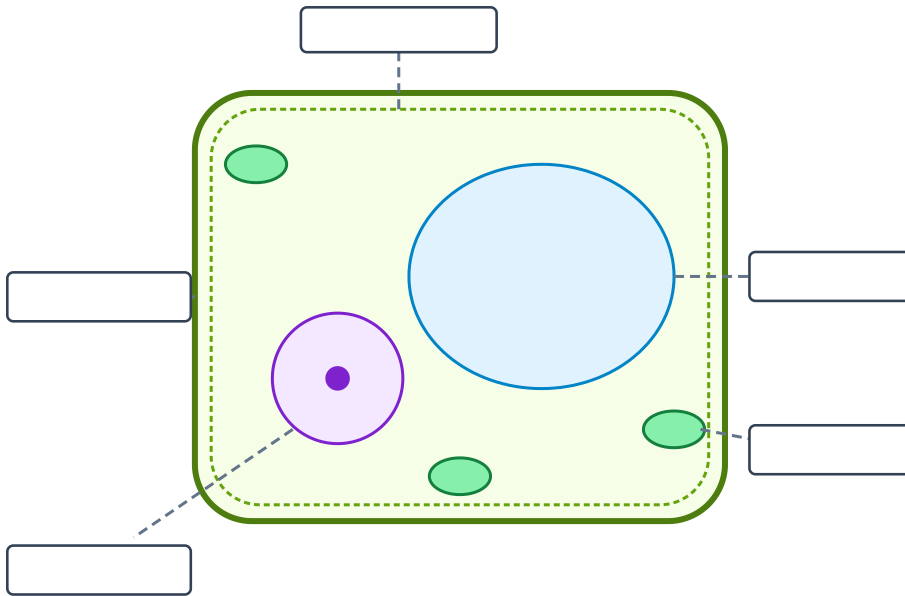

cell wall

cell membrane

nucleus

vacuole

chloroplasts

🔑 WORD TO KNOW

Cell wall — a stiff outer layer. It gives the cell its shape.

🔑 WORD TO KNOW

Cell membrane — a thin layer inside the wall. It controls what goes in and out.

🔑 WORD TO KNOW

Vacuole — a big space that stores water.

🔑 WORD TO KNOW

Chloroplasts — small green parts. They make food using sunlight.

🔑 WORD TO KNOW

Nucleus — the control centre of the cell.

⚠️ WATCH OUT

Many people think plant cells and animal cells look the same. Plant cells have a cell wall, a big vacuole, and chloroplasts. Animal cells do not have these parts.

What Each Part Does

Part	What it does
Cell wall	_____
Cell membrane	_____
Nucleus	_____
Vacuole	_____
Chloroplasts	_____

✓ CHECK YOURSELF

Does a plant cell have a cell wall? Say yes or no out loud.

WORD BANK

gives the cell its shape and support

controls what goes in and out of the cell

controls the cell's activities

stores water and keeps the cell firm

makes food using sunlight

One part I'm still not sure about:
