

Above Ground or Below Ground — Circle It

Name: _____

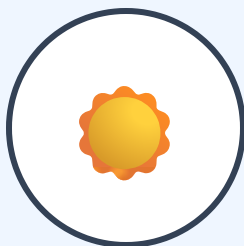

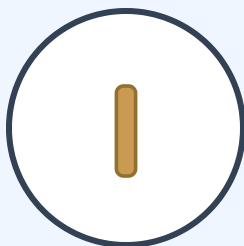

To the adult helping: Read each line out loud. Say the name of every picture before asking the student to circle. The student can circle with a pencil, point, or tell you which ones — any of these is fine.

TEACHER NOTE — MODIFIED OUTCOME

Student identifies which plant parts grow above the ground and which grow below the ground, with increasing independence. Confirmed with IPP team. Distractor pictures (not plant parts) check real recognition, not just position.

ABOVE THE GROUND

Circle the PLANT PARTS that grow above the ground.

BELOW THE GROUND

Circle the PLANT PARTS that grow below the ground.
