

Plant Reproduction — Two Ways Plants Make New Plants

Name: _____ Date: _____

To the adult helping: Read every part of this page aloud with the student, including the word banks. The student can say an answer, point to it, or write it — any of these is fine.

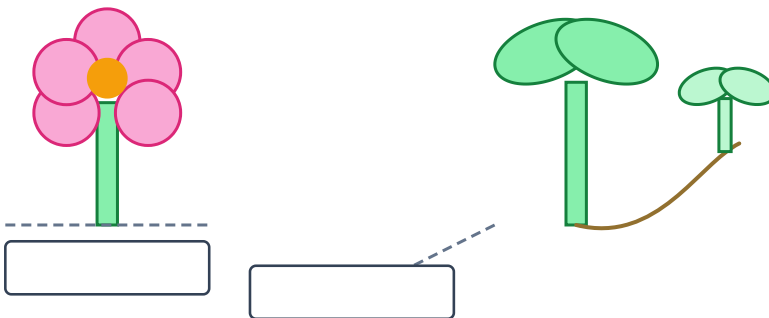

I can compare the two ways plants make new plants.

Plants can make new plants two ways. One way uses seeds. One way does not use seeds. Look at the picture. Find each way.

WORD BANK

sexual reproduction

asexual reproduction

WORD TO KNOW

Sexual reproduction — making a new plant using a flower, pollen, and a seed.

WORD TO KNOW

Asexual reproduction — making a new plant from a piece of the parent plant. No seed is needed.

WORD TO KNOW

Pollination — moving pollen from one flower to another. This has to

Compare the Two Ways

Type	What is needed	One example
Sexual	_____	_____
Asexual	_____	_____

WORD BANK

a flower and pollen

a piece of the parent plant

a seed growing into a new plant

a runner, bulb, or cutting growing into a new plant

One part I'm still not sure about:

happen before a seed can form.

WORD TO KNOW

Runner — a stem that grows along the ground and starts a new plant.

WATCH OUT

Many people think flowers are just pretty. A flower's real job is helping the plant make seeds.

WATCH OUT

Many people think making a copy of a plant is not natural. Many plants make copies of themselves in nature, using runners, bulbs, or cuttings. This is called asexual reproduction.

CHECK YOURSELF

Does every new plant come from a seed? Say your answer out loud.
