

Lily Lab: Take a Flower Apart

Name: _____ Date: _____

To the adult helping: Read every part of this page aloud with the student, including the word banks. The student can say an answer, point to it, circle it, or write it. Any of these is fine. The student works with a group but fills in this sheet.

I can find the parts of a flower. I can say what each part does.

Your job Take a lily apart

Your group gets one lily flower. You will take it apart, one part at a time. You will count the parts. Then you will press the parts flat to keep.

Rules Lab rules

-  Orange pollen stains. Do not rub it.
-  Do not eat any part of the lily.
-  Lilies make cats sick. Keep lilies away from cats.
-  Only your teacher uses the sharp knife.
-  Wash your hands at the end.

WORD TO KNOW

Dissect: to take something apart carefully to look inside.

WORD TO KNOW

Pollen: yellow or orange dust. It helps make seeds.

Guess: a lily has bright colours. Who are the colours for? (circle one)

people

bees and butterflies

the sun

Look The 4 parts of a lily

A lily has 4 kinds of parts. Each part has a job. The job is to help make seeds.

REMEMBER

Flowers make seeds. Seeds grow new plants.

WORD BANK

sepal

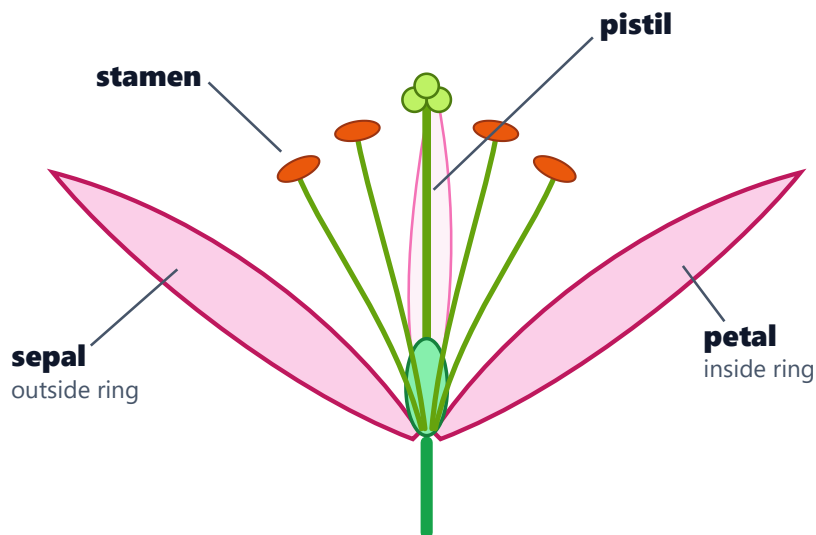

petal

stamen

pistil

STAMEN

Makes **pollen**. It has an orange tip.

PISTIL

Makes **seeds**. It stands in the middle.

WATCH OUT

On a lily, sepals look like petals. Sepals are the outside ring.

Do Take the lily apart

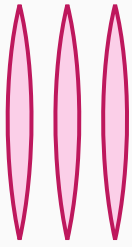

Start on the outside. Work in to the middle. Do the 3 steps for each part.

1 Pull the part off gently.

2 Lay it in its box below.

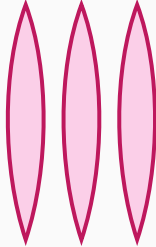

3 Count them. Write the number.

sepals

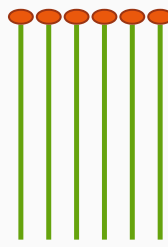

How many?

petals

How many?

stamens

How many?

pistil

How many?

Which part has the orange pollen? (circle one)

sepal

stamen

petal

Touch the top of the pistil gently. How does it feel? (circle one)

sticky

dry

hard

Why is that a good way to feel? _____

REMEMBER

The sticky top of the pistil catches pollen.

CHECK YOURSELF

Point to the part that makes seeds.

Press**Press the parts flat**

Pressing dries the parts flat. Then they last a long time. We use special paper called archival paper.

 WORD TO KNOW

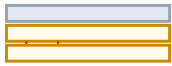

Archival paper: paper that stays white for many years.

1

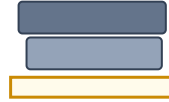

Lay down the special paper.

2

Put the parts on it. Parts do not touch.

3

Cover with more paper.

4

Put heavy books on top. Wait 2 weeks.

Why do we press the flower parts? (circle one)

to dry them flat**to make them grow****to make pollen** **REMEMBER**

Wet parts can go mouldy.
Change the grey paper on
Day 2 and Day 4.

Which part will be hardest to press flat? (circle one)

thin petal**thick pistil**

Why? _____

Label Make your label

Glue your dry parts on the special card. Write a label in pencil.

Flower: **Lily**

My name: _____

Date: _____

Parts on my card: _____

Match Draw a line from each part to its job

sepal

petal

stamen

pistil

● makes pollen

● makes seeds

● covers the bud

● calls bees and butterflies

Look at your guess on page 1. Who are lily colours for? (circle one)

people

bees and butterflies

the sun

How do you know? _____

⚠ WATCH OUT

Many people think flowers are pretty for us. Colours call bees and butterflies to carry pollen.
